

Anthony Baybayon

AI was leveraged to gain understanding of the Hugging Face transformers library, as well as other relevant LLM training libraries. It also assisted in looking for possible models to train that have native support for Philippine languages.

Dawson Catignas

AI assisted in learning the libraries needed for the scraping, preprocessing, and parallel corpus creation steps. It assisted in creating the format for the files needed for training the model.

Paolo Cruzado

AI tools were used to assist in understanding technical concepts such as LoRA fine-tuning, BLEU evaluation, and multilingual transfer learning. They were also used to help improve the clarity, structure, and grammar of certain sections of the paper.

Mariel Tamondong

The checking of the correctness and alignment of the parallel corpora was checked with the assistance of translation using AI tools.
